- ✓ Graphics used in the lobby area &Columns.
- ✓ Live window effect in the Workspace.
- ✓ Step Seating in the Lounge area.

SHOWCASE | SPACE, ENERGY AND PRODUCTIVITY OPTIMIZATION MADE SIMPLE WITH LIGHTING!

Modern workspaces, today, capitalize on the interplay between design, functionality, aesthetics, light, and architecture.

The trend is to provide collaborative spaces that are attractive, bright and can be flexibly utilized in creating ideal conditions that stimulate new and cooperative working.

However, global statistics reveal 40% of such office spaces remain largely empty and unutilized. With an average cost per workstation working out to an annual USD 10,000 – 15000, of which energy and lighting constituting 57% that does not manifest from actual occupancy levels, it is important that spaces and energy are optimally utilized to improve productivity.

An important component of the new building concept – is networked and intelligent lighting which combines everything that the future has to offer, ranging from sensors and light management to Human Centric Lighting and predictive maintenance.

With an average employee spending at least 30 % of his/her daily work time looking for meeting rooms and workspaces which in turn lowers productivity, networked and intelligent lighting comes in handy in harnessing technology at minimum costs to meet such challenges.

With TRILUX XPERIENCE, the light experts now transform the fascination of light in all its facets into genuine experiences, ranging from emotional effects to inherent savings potential. For this purpose they have developed an intelligent platform Trilux LIVELINK PoE, a system comprising Livelink Engine - CPU, Sensors, Director – runs logical operations in connected engines and Software for control, visualization, and evaluation via smart devices that can be used by all customers according to their specific interests.

While the tangible benefits of LIVELINK PoE include optimizing energy, efficiency and occupancy costs, it goes an extra mile in enhancing the perceptive advantages of light in improving well-being, creativity, innovation, and communication.

Using Livelink PoE, managing Space, Energy and Productivity is simplified through occupancy visualization, conference room utilization & HVAC management, smart & preventive maintenance, lighting control, shared and hot-desking with space utilization analytics. Simplify your light, making Light go beyond just illumination!
